

ENVIRONMENTAL POLICY

Special Steel Co. Ltd and its group of companies specialise in the procurement, processing and testing of ferrous and non-ferrous materials, which services a wide variety of industries ranging from light/heavy engineering to aerospace, oil, gas and energy producers.

The nature of the company's activities not only places particular emphasis upon experience, expertise, reliability and quality, but also on recognising the consequences of some of the operations on the environment both locally and globally.

We will on a continuing basis aim to:

- Minimise the environmental impact of processes by controlling waste, effluents, emissions, energy consumption, and the related risk of pollution.
- Optimise the use of resources for the management of energy.
- Establish and maintain environmental emergency contingency plans.
- Not only comply with the relevant environmental legislation and regulations but consider best practices that are environmentally sound, where operationally possible.

In order to achieve our policy objectives, we will maintain an efficient and effective management system which has been planned and developed in conjunction with all management functions.

The company's environmental management system is designed and written to comply with the requirements of environmental legislation and **BS EN ISO 14001**. This is aimed at enhancing the surroundings in which we operate, including air, water, land, natural resources, flora, fauna, humans and their interrelation.

It is a prerequisite that all management ensure that all employees are aware of this policy, read it and understand it.
